PROFESSIONAL SUMMARY

Data Engineer with around 3 years of experience building enterprise-scale data validation and automation solutions in the banking domain. Experienced in Python, Snowflake, ETL workflows, metadata-driven frameworks, data quality controls, reconciliation processes, and enterprise orchestration systems. Hands-on experience designing validation frameworks, implementing automated data quality checks, developing unit-tested Python solutions, and supporting large-scale data pipelines. Currently expanding expertise in AWS cloud technologies, PySpark, Iceberg-based data lake architectures, and cloud-native data engineering platforms.

WORK EXPERIENCE

Tata Consultancy Services, Data Engineer 08/2023 – Present | Pune, India

- Developed and maintained enterprise Python-based validation frameworks supporting large-scale ETL and data warehouse workflows.
- Implemented metadata-driven validation controls using YAML configurations for automated data quality and reconciliation processes.
- Built validation checks including record count reconciliation, aggregate/sum-dollar validations, schema validation, and source-to-target consistency checks.
- Integrated validation frameworks with Snowflake to capture audit metrics, validation outcomes, control execution details, and operational reporting.
- Collaborated with business, ETL, and data engineering teams to investigate data quality issues and support production releases.
- Developed reusable preprocessing and validation modules to support ingestion quality checks across multiple data sources.
- Contributed to enterprise orchestration workflows using Zena scheduling and automation platforms.

Tata Consultancy Services, Junior Software Engineer (Internship) 01/2023 – 03/2023 | Pune, India

- Contributed to a MERN stack-based project, gaining hands-on experience with React.js, Node.js, and Express.js.
- Developed UI components and worked on frontend integration.
- Gained exposure to enterprise-level development practices within a client-driven environment.

EDUCATION

B.Tech CSDS (Computer Science sp. in Data Science), Mediacaps University Indore, M.P 08/2019 – 05/2023
9.00 CGPA

SKILLS

Programming: Python, SQL, PySpark

Data Engineering and Orchestration: ETL Pipelines, Data Validation Frameworks, Data Quality Controls, Data Reconciliation, Snowflake, Zena Scheduler, Workflow Automation

Cloud & Big Data:: AWS S3, AWS Glue, AWS Athena,

Testing & DevOps: Pytest, Git, CI/CD, Jira

PROJECTS

Startup Validator (AI Product) 🌐, *Built an AI-powered platform that evaluates startup ideas and provides structured feedback using LLMs.*

- Developed backend APIs using **FastAPI** to process startup ideas and generate structured validation reports.
- Integrated **local LLMs via Ollama** to analyze business ideas across market size, competition, feasibility, and risks.
- Designed a **Streamlit-based frontend** for interactive user input and real-time AI responses.
- Implemented prompt pipelines to generate **step-by-step startup validation insights**.
- Built a modular architecture separating **API layer, LLM logic, and UI layer**.
- Deployed the application for public access with a live interface.

Website Summarizer (GenAI Application) 🌐,

Built an AI-powered tool that extracts and summarizes key information from websites using large language models.

- Developed backend APIs using **FastAPI** to fetch website content and generate structured summaries.
- Implemented web content extraction and preprocessing to convert raw HTML pages into clean text inputs for LLM processing.
- Integrated **LLM APIs** to generate concise summaries and highlight key insights from long web pages.
- Built a responsive **React-based frontend** for users to input URLs and view generated summaries in real time.

AI-Powered Automation Chat Agent,

Enterprise automation platform enhancing client interactions with OpenAI-powered chatbot and analytics dashboards.

- Tech Stack - React.js, JavaScript, REST APIs, OpenAI, Jest (Unit Testing), Jira, Agile
- Migrated and enhanced an automation chat agent powered by OpenAI, improving response accuracy and user experience.
- Developed analytics dashboards to track usage patterns and gather client feedback for continuous optimization.
- Integrated REST APIs for seamless communication between frontend and backend services.
- Implemented unit testing frameworks to ensure code reliability and reduce production issues.
- Collaborated with global stakeholders through presentations and client visits, ensuring alignment with business requirements.
- Delivered a scalable and intuitive UI migration that improved adoption among enterprise users.

AWARDS AND RECOGNITION

TCS Idea Igniter-Milestone Achiever

- Recognized for contributing to AI-driven solutions as part of an internal TCS hackathon.

On-the-Spot Team Award

- Awarded for consistently delivering high-quality work and contributing effectively to team goals.
